

# CO<sub>2</sub> emitters in Europe 2016

## WHAT IS CO<sub>2</sub> (CARBON DIOXIDE)?

CO<sub>2</sub> is a greenhouse gas. It may originate from natural sources or from the burning of fossil fuels. The increased CO<sub>2</sub> concentration in the atmosphere due to human activity therefore contributes to global warming. For this reason, reduction of the greenhouse gas CO<sub>2</sub> is one of the central climatic objectives.
